

$$2(2(4x+1,5)) + 2(2x) = 18$$

$$(8x+3) + 4x = 18$$

$$12x+3 = 18$$

$$12x = 15$$

$$x = \frac{15}{12} = 1,25$$

verif

$$2(4 \times 1,25 + 1,5) + 2(2 \times 1,25)$$

$$13 + 5$$

$$= 18$$
